# Forensic Video Enhancement Software for Law Enforcement

## Ikena Forensic Product Overview

Ikena Forensic equips analysts with tools for enhancing video from any source including body cameras, security cams and mobile phones. Our software allows you to quickly identify important details like faces, license plates and the make and model of cars to produce forensically-valid evidence for court. Our GPU-accelerated technology makes importing, rendering enhancements, and exporting your results faster and easier than other software.

Trusted by organizations like the U.S. Secret Service, NCIS, Scotland Yard, and NYPD, our Windows-based solution does not require any special hardware or time-consuming training. Enhancing your video can be achieved in 3 simple steps: import, enhance and export.

### About Us

MotionDSP is a leader in advanced image processing software that helps police and organizations extract critical information from video. Our software is used by the U.S. Secret Service, Scotland Yard, NCIS and many other agencies around the world.

### Contact

## Ikena Forensic's Capabilities

Over the **past decade**, we have perfected several patented algorithms to help you **get the most from your video**.

### Super Resolution

Patented algorithm combines multiple frames of video to recover details and remove noise.

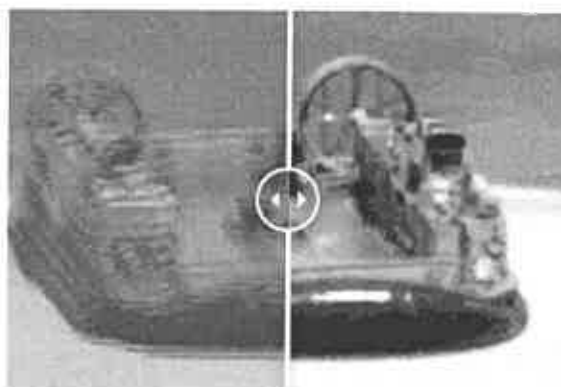

### Deinterlacing

Recover 2x the resolution with our patented kernel regression deinterlacing.

### Light & Contrast

Helps you uncover details that you may otherwise miss in your video.

### Stabilization

Stabilizes shaky video from the most extreme cases with multi-frame stabilization.

## 3 Simple Steps to Enhance Your Video

### 1. Import Video from any Source

Easily import video from body cams, dash cams, CCTV systems, security cameras and phones.

### 2. One-Click Video Enhancement

Ikena Forensic's intuitive user interface includes one-click auto setting presets and fine tuning controls.

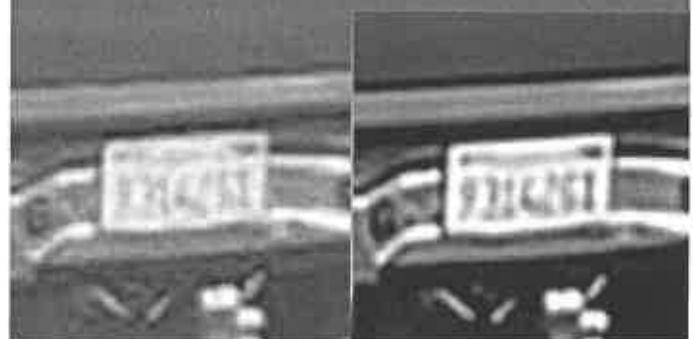

### 3. Export File for Evidence in Court

Export enhanced snapshots, videos and auto-generated reports that are ready to present in court as evidence.

**Identify Faces**

**Read License Plates**

# Video Redaction Software for Law Enforcement

## Ikena Spotlight Product Overview

MotionDSP's advanced video and audio redaction software, Ikena Spotlight, uses proprietary object-tracking technology to help automate the process of blurring faces, license plates or any other personally identifiable information, saving your police department time and money.

FOIA requests for body camera footage from citizens and the media can leave your department buried with the expensive and time-consuming task of redaction. With manual redaction taking upwards of 17 hours for a 4-minute video, it's easy to see how quickly the costs of labor can add up when you consider the amount of footage being collected every day by your officers.

Ikena Spotlight helps ease the burden on your team and cuts redaction down to a fraction of the time it takes with other products. Ikena Spotlight is easy to use, works with video from any camera source and requires very little training for even the most non-technical person.

### About Us

MotionDSP is a leader in advanced image processing software that helps police and organizations extract critical information from video. Our software is used by the U.S. Secret Service, Scotland Yard, NCIS and many other agencies around the world.

## Ikena Spotlight's Features

Save time and money while protecting identities and personally-identifiable information in video evidence.

### Automated Tracking Technology

Advanced tracking algorithms greatly reduce the number of steps needed to track faces and objects and either blur or highlight them.

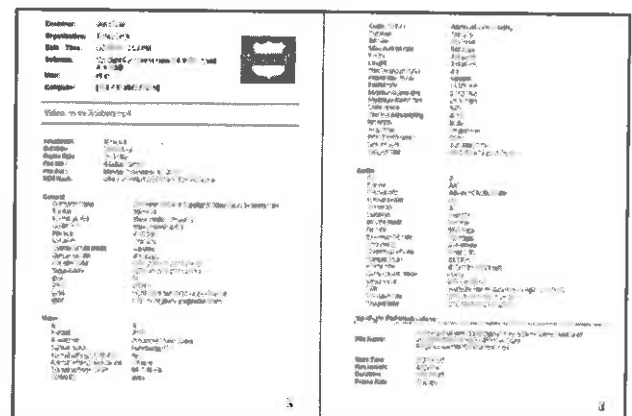

### Audio Redaction & Modulation

Beep, mute or modulate specific clips of audio in your video to protect the identities of witnesses, minors, victims and undercover police officers.

### Audio Waveform Bar

Gives you a visual representation of audio in your video to more quickly identify where potential private information is being verbally shared.

### Redaction Report

Automatically generate a redaction report that documents all video and audio redactions made to your video for use in court or public release.

## Ikena Spotlight

### Video and Audio Redaction Software

MotionDSP's advanced video and audio redaction software, Ikena Spotlight, uses proprietary object-tracking technology to help automate the process of blurring faces and other personally identifiable information, saving police departments countless hours compared to manual frame-by-frame redaction. Spotlight is agnostic and can be used with video from different brands of body cameras, in-car cameras, dash cams and even cell phones. It also features audio redaction and modulation to mute, bleep or disguise the voices of undercover officers, witnesses and minors.

[Buy Now](#)[Schedule Demo](#)[Download Brochure](#)

### Features

#### Automated Tracking Technology

Spotlight's automated tracking algorithms greatly reduce the number of steps needed to mask and blur objects and remove the need for frame-by-frame redaction.

#### Audio Redaction

Bleep, mute or modulate specific clips of audio in your video to protect the identities of witnesses, minors, victims and undercover police officers.

#### Audio Waveform Bar

The waveform bar in Spotlight gives you a visual representation of audio in your video to more easily identify where potential dialogue is taking place.

#### Create Snapshots

Create and export a snapshot of any frame in your video to present as evidence in court or to share to get the public's help to identify suspects.

#### Timeline Trimming

Trim videos to redact and export only the sections that are most important to you, while also reducing the sizes of your files.

#### Redaction Report

Automatically generate a redaction report that documents all video and audio redactions to your video for use in court or public relations.

## Use Cases

### Spotlight the Important

Prepare video evidence for court by highlighting a person's or object's activities, even in the background or in dark areas of a video. This helps focus the audience's attention on the most important info.

### Obscure the Irrelevant

Focus attention on the movements of the suspect or relevant actions by obscuring and masking the distracting parts of the video. This allows cases to be made more quickly and clearly.

### Protect the Innocent

Obscure or redact images in video footage of people who need to remain anonymous, or are not part of relevant events. The innocent are protected, and irrelevant are no longer a distraction.

## Frequently Asked Questions

### How much does an Ikena Spotlight license cost?

Licenses are perpetual meaning once you purchase them, you own them forever. One year of support and product updates is included with each license. If you wish to stay current with the software, you must renew your support after the first year. Detailed pricing can be found [here](#).

### Will Ikena Spotlight work with my body cameras?

We've tested video files from nearly every major body camera manufacturer including Taser, Panasonic, WatchGuard, Reveal, CODAN, Digital Ally and more. Our software is meant to be camera-agnostic and work with video from nearly any source including, but not limited to, security cameras, dash cams/in-car systems and mobile phones.

### What are the system requirements for this software?

For a list of specific system requirements, please visit [this page](#). Basically, you'll need a modern Windows-based desktop or laptop with a good graphics card.

### Are the video redactions reversible?

To prevent a redaction from being reversed, we recommend using our solid color option to redact faces and objects. This method permanently changes the pixel values in the chosen area.

### Is support included with a license?

Yes, each license includes one year of support and product updates. Additional years of support can be purchased upfront at a reduced price. Keeping your support current means you'll have access to all of the latest upgrades and features, as well as phone and email support from our team.

### Is your solution fully automated?

While we do have automated tracking technology to make redaction much faster, we don't claim to be fully automated. We've seen claims from competitors that no human interaction is needed with their software, but this simply isn't true. There are dangerous and costly repercussions if someone's privacy isn't protected properly. Read more [here](#).

### Do you offer demos?

Online demos are scheduled on Tuesday and Thursday, excluding holidays. Please sign up for a demo by filling out our online form [here](#).

### Are the audio redactions reversible?

No. "Mute" completely removes the audio in the given section. "Beep" completely overwrites the audio through the beep signal in the given section. "Resample" distorts frequencies of the audio which changes the pitch randomly, not with a predefined value, so the audio cannot be reversed to its original state.
